Özet

What we propose for DAG is therefore a natural guide star GLAO system, that can be turned into a highly efficient AO system. Thus the working principle and expected performance analysis will be shown. In this manner most DAG users will be able to make some use of the DAG AO. Later, it will be possible to upgrade the system by changing the algorithm and adding 1 or 2 additional DM, and even laser guide stars.

Anahtar Kelimeler: instrumentation: adaptive optics, Gözlemevleri, Teleskoplar, Aletler, Yazılım
